

PROFESSIONAL SUMMARY

Founding Engineer candidate with 3 production software engineering internships and a portfolio of independently shipped, production-grade systems. Comfortable owning the entire technology stack — from Firebase backend architecture and Laravel REST API design to cross-platform Flutter mobile apps, React.js web interfaces, and AI/LLM pipeline integration. Built and independently deployed a 4-app hyperlocal marketplace ecosystem (comparable in architecture to DoorDash), a cross-platform messaging application across 5 operating systems, and an agentic AI career platform with autonomous OpenAI/Anthropic pipeline orchestration — all from 0 to production. Proven ability to make architectural decisions under ambiguity, ship fast without sacrificing code quality, and operate as a multiplier across the full stack. Comfortable with Docker, GitHub Actions CI/CD, AWS, and Firebase Cloud Functions in production. Open to equity-first compensation. CGPA: 7.8/10. Available immediately.

TECHNICAL SKILLS — FULL STACK GENERALIST

Mobile (iOS & Android):	Flutter 3.x · Dart 3.9 · Riverpod 2 · GoRouter 14 · Dio 5 · FCM · APNs · flutter_secure_storage · CustomPainters · Android Studio · Xcode
Backend:	Laravel · PHP 8.2 · Node.js · Express.js · REST API Design · JWT · RBAC · Eloquent ORM · PHPUnit · Redis · Service-layer Architecture · Middleware
Frontend:	React.js 18 · Next.js 14 · TypeScript · Tailwind CSS · Bootstrap 5 · HTML5 · CSS3 · Responsive Design · Component Architecture
Firebase / BaaS:	Firestore · Firebase Auth · Cloud Functions (Node.js) · FCM · Firebase Hosting · Real-time Streams · Transaction Batch Writes · Security Rules
AI & Agentic:	OpenAI API · Anthropic API · OpenRouter · LLM Orchestration · Agentic Pipeline Design · Prompt Engineering · Structured AI Outputs · RAG concepts
Cloud & DevOps:	AWS (EC2 · S3 · IAM · RDS · Lambda) · Docker · GitHub Actions · CI/CD Pipelines · Linux · Vercel · Firebase Hosting
Databases:	MySQL · PostgreSQL · MongoDB · Redis · Firestore · Schema Design · Query Optimisation · Indexing · Migrations · Transaction Writes
Architecture:	State Machine Design · Event-driven Architecture · Distributed Systems · Microservices concepts · Service-layer Architecture · SOLID Principles
Product Thinking:	User journey design · Role-based UX · A/B testing · Conversion optimisation · Product analytics · Zero-to-one product delivery
Languages:	PHP · JavaScript · TypeScript · Dart · Python · Java · SQL · C · C++

ENGINEERING EXPERIENCE

Trapigo · Backend Engineer Intern

Jun 2025 – Sep 2025 · Bangalore, India · On-site

- Owned the complete API layer — architected, built, tested, and shipped 15+ production REST endpoints serving Flutter and React clients; achieved **30% API latency reduction** through N+1 elimination, eager loading, and Redis caching; implemented JWT auth + RBAC + PHPUnit tests with zero production incidents.
- Operated with high autonomy in a startup environment — made independent architectural decisions on service-layer design, database schema structure, and caching strategy without waiting for approval at every step.

Ceeras · Frontend Engineer Intern

Feb 2025 – Jun 2025 · Remote

- Delivered **6+ production features** end-to-end from Figma spec to deployed UI — **25% faster** design-to-code cycle through reusable architecture; zero regression across 3 major releases; improved Lighthouse scores through performance engineering.
- Worked remotely in a fast-moving team — demonstrated **self-directed execution**, **async communication**, and the ability to ship independently without hand-holding.

BlueStock Fintech · Software Development Intern

Feb 2025 – Mar 2025 · Pune, India

- Contributed to fintech UX design and **A/B testing across 3 conversion flows** — data-driven product thinking improving user task-completion rates. Exposure to regulated financial product delivery requirements.

0 → PRODUCTION PROJECTS

LocalKart — 4-App Hyperlocal Marketplace (Built Entirely Solo) | Flutter 3.x · Dart · Riverpod 2 · GoRouter · Firebase Auth · Firestore · Cloud Functions · FCM · Hosting [GitHub](#) · [Customer](#) · [Merchant](#) · [Delivery](#) · [Admin](#)

- Independently designed, built, and shipped 4 production Flutter applications** (Customer · Merchant · Delivery Partner · Super Admin) from scratch — architecting the Firestore multi-tenant backend, designing security rules, building all 4 UIs, and deploying to Firebase Hosting with live URLs. **Zero team. Zero budget. Production live.**
- Solved real architectural challenges end-to-end: **asynchronous race conditions** in concurrent Firestore writes (solved via transaction batch writes + StreamProviders), **SMS OTP cost elimination** (solved via synthetic email mapping over Firebase Auth), **<150ms cross-app state sync** (solved via specialised Firestore stream architecture).
- Product-grade UX shipped independently: **15-second live countdown order modal** with Riverpod countdown state, **custom Bezier-path delivery route** via Flutter CustomPainters, **3-stage KYC onboarding pipeline** with reactive state-machine dashboard — all built and iterated by a single engineer.

Student Internship Hub — Agentic AI Platform (Full Stack, Solo Built) | Laravel · PHP 8.2 · MySQL · Tailwind CSS · OpenAI API · Anthropic API · Docker · GitHub Actions · Redis [GitHub](#) · [Live Demo](#)

- Conceived, designed, and shipped a full-stack AI career platform** — Laravel REST API backend, Tailwind CSS frontend, agentic OpenAI/Anthropic pipeline, Docker containerisation, and GitHub Actions CI/CD pipeline — **entirely solo, from idea to production deployment.**
- Made every founding-level decision: technology stack selection, database schema design, API contract structure, authentication architecture, AI prompt pipeline design, caching strategy (Redis ~40% DB read reduction), and deployment infrastructure.
- Shipped AI features in production** — autonomous multi-step LLM pipeline delivering structured career-fit scores in <2s; recruiter dashboard with AI-powered candidate evaluation tools; 5-stage state-machine hiring workflow with full audit logging — all working in live production.

Student Internship Hub — Flutter Mobile App (iOS & Android, Solo Built) | Flutter 3.x · Dart 3.9 · Riverpod 2 · GoRouter 14 · Dio 5 · flutter_secure_storage · OpenAI API [GitHub](#) · [Live Demo](#)

- Built a complete iOS & Android application independently** — authentication, role-based routing (Student/Recruiter), AI resume optimiser integration (OpenAI/Anthropic/OpenRouter), Dio 5 interceptors, secure token storage, and personalised dashboards for each role — shipped to production.

Pulse — Cross-Platform Messaging App (5 Platforms, Solo Built) | Flutter 3.x · Dart · Firebase Firestore · Cloud Functions (Node.js) · FCM · APNs · 5 Platforms [Live](#) [GitHub](#)

- Shipped a real-time messaging application across iOS, Android, Linux, Windows, and Web** — single Flutter codebase; sub-100ms Firestore delivery; production Node.js Cloud Function for FCM/APNs push; MockNotificationService offline fallback; WhatsApp-style foreground suppression. **Solo. Live. Working.**

WHY FOUNDING ENGINEER

I don't wait to be told what to build. I've shipped 4 production apps serving multiple user roles, a full AI platform, a real-time messaging system, and a complete backend API layer — all without a team, without a senior engineer holding my hand, and without a budget. I make architectural decisions, own production deployments, debug live incidents, and iterate on product. I'm at my best in the zero-to-one phase where the person who ships wins, not the person who over-designs. Open to equity-first, mission-aligned opportunities where I can own meaningful technical scope from Day 1.

EDUCATION

B.Tech Computer Science Engineering

2022 – 2026 (Completed)

Gopal Narayan Singh University, Bihar, India · CGPA: 7.8 / 10

Core coursework: Data Structures & Algorithms · OOP · DBMS · Operating Systems · Computer Networks · System Design · Compiler Design

CERTIFICATIONS & ACHIEVEMENTS

- Top 25 Teams — Code For Bharat Season 2 (National-level software engineering hackathon, India)
- LeetCode — 150+ problems solved across Arrays · Hash Maps · Strings · Recursion · Two Pointers
- Certificate of Participation — TATA Crucible Campus Quiz 2024
