

PROFESSIONAL SUMMARY

Software Engineer with 3 production software engineering internships and a strong foundation in Data Structures & Algorithms, Object-Oriented Programming, System Design, and scalable software architecture. Proven ability to own features end-to-end — from database schema design and REST API development to responsive UI implementation and production deployment. Built and shipped a 4-app hyperlocal marketplace ecosystem with real-time multi-tenant synchronisation, an agentic AI career platform with autonomous LLM pipeline orchestration, and a cross-platform messaging application deployed across 5 operating systems. Proficient in PHP (Laravel), JavaScript (React.js, Node.js), Dart (Flutter), Firebase, MySQL, Redis, Docker, GitHub Actions CI/CD, and AWS. Achieved a 30% reduction in API response latency and a 25% improvement in frontend development cycle time in production environments. CGPA: 7.8/10. Available immediately.

TECHNICAL SKILLS

Languages:	PHP 8.2 · JavaScript (ES6+) · TypeScript · Dart · Java · Python · C · C++
Backend:	Laravel · Node.js · Express.js · REST API Design · JWT · RBAC · Sanctum Auth · Eloquent ORM · PHPUnit · Redis · Service-layer Architecture
Frontend:	React.js 18 · Next.js 14 · Tailwind CSS · Bootstrap 5 · HTML5 · CSS3 · Responsive Design · Component Architecture
Mobile:	Flutter 3.x · Dart 3.9 · Riverpod 2 · GoRouter 14 · Dio 5 · FCM · CustomPainters · Android Studio · Xcode
Databases:	MySQL · PostgreSQL · MongoDB · Redis (Caching) · Firestore · Eloquent ORM · Query Optimisation · Schema Design · Indexing · Migrations
Cloud & DevOps:	AWS (EC2 · S3 · IAM · RDS · Lambda) · Docker · GitHub Actions · CI/CD Pipelines · Firebase (Auth · Firestore · Cloud Functions · Hosting) · Linux
AI & Agentic:	OpenAI API · Anthropic API · OpenRouter · LLM Orchestration · Agentic Pipeline Design · Prompt Engineering · Structured AI Outputs
Testing & QA:	PHPUnit · Unit Testing · Integration Testing · API Testing (Postman) · A/B Testing · Cross-browser Testing · Regression Testing
Engineering:	Agile / Scrum · Code Review · Version Control (Git) · Technical Documentation · Cross-functional Collaboration · Pair Programming
CS Fundamentals:	Data Structures & Algorithms · System Design · OOP · DBMS · Operating Systems · Computer Networks · Compiler Design · SOLID Principles

SOFTWARE ENGINEERING EXPERIENCE

Trapigo · Backend Engineer Intern

Jun 2025 – Sep 2025 · Bangalore, India · On-site

- Architected and shipped 15+ production-grade RESTful API endpoints consumed by Flutter mobile and React web clients — achieved a 30% reduction in average API response latency through N+1 query elimination, eager loading, and MySQL indexing strategies across 5 relational entities under concurrent-user production load.
- Implemented JWT-based stateless authentication, RBAC, and custom middleware across all routes; authored PHPUnit unit tests for all service-layer classes, enforcing Controller → Service → Model separation of concerns and ensuring long-term codebase testability and maintainability.
- Designed normalised MySQL schemas with referential integrity via Eloquent ORM and migration versioning; integrated Redis session caching on high-frequency endpoints — reducing repeat database reads on live production traffic and improving server throughput under peak load.
- Practised Agile software development — participated in sprint planning, daily standups, code reviews, and retrospectives; collaborated cross-functionally with mobile and frontend engineering teams on API contract design and integration testing.

Ceeras · Frontend Engineer Intern

Feb 2025 – Jun 2025 · Remote

- Delivered 6+ production React.js feature modules against Figma specifications — reduced design-to-implementation cycle time by 25% through reusable component architecture and shared design-token alignment; maintained zero regression across 3 major feature releases through systematic pre-deployment functional testing.
- Integrated REST API services with client-side state management across all feature modules; applied lazy loading, React memoisation, and code splitting strategies — achieving measurable Lighthouse performance score improvements on production pages serving real end-users.
- Maintained clean, readable, well-documented code throughout the internship — contributed to team code reviews, flagged edge cases in API error handling, and documented component APIs for faster onboarding of new team members.

BlueStock Fintech · Software Development Intern

Feb 2025 – Mar 2025 · Pune, India

- Contributed to UI/UX prototyping and front-end implementation for a retail-investor fintech platform; conducted A/B tests across 3 primary conversion flows — analysed engagement metrics, iterated designs, and delivered measurable improvement in user task-completion rates on the platform's onboarding funnel.

ENGINEERING PROJECTS

LocalKart — Multi-Tenant Hyperlocal Marketplace Ecosystem | Flutter 3.x · Dart · Riverpod 2 · GoRouter · Firebase Auth · Firestore · Cloud Functions · FCM · Hosting [GitHub](#) · [Customer App](#) · [Merchant App](#) · [Delivery App](#) · [Admin](#)

- Designed and shipped a 4-application software ecosystem (Customer · Merchant · Delivery Partner · Super Admin Dashboard) as independent cross-platform Flutter applications sharing a single Firestore backend — achieving real-time state synchronisation across all user roles at <150ms latency, comparable in architecture to production delivery platforms such as DoorDash and Delivery Hero.
- Applied distributed systems design principles throughout: Firestore transaction batch writes for atomicity, reactive StreamProvider state machines for the KYC pipeline (Approved · Pending · Offline), and event-driven multi-user synchronisation — resolving asynchronous race conditions across concurrent write operations.
- Implemented secure custom authentication over Firebase Auth using synthetic email mapping, eliminating SMS OTP costs; built advanced UX features: 15-second order invitation modal with countdown state management and a custom Bezier-path route visualisation via Flutter CustomPainters.

Student Internship Hub — Agentic AI Career Platform (Web) | Laravel · PHP 8.2 · MySQL · Tailwind CSS · OpenAI API · Anthropic API · Docker · GitHub Actions · Redis [GitHub](#) · [Live Demo](#)

- Architected a production-grade 5-stage state-machine workflow (Applied → Under Review → Shortlisted → Interview → Decision) with full event-sourced audit logging — enforcing traceable, compliance-ready software behaviour at every state transition.
- Engineered an autonomous AI career assistant using the OpenAI API — backend orchestrates multi-step agentic prompt pipelines, processes candidate profiles, and returns structured career guidance and role-fit scores in <2 seconds without human intervention per evaluation cycle.
- Enforced software engineering best practices throughout: service-layer architecture (Controller → Service → Model), PHPUnit unit tests, Docker containerisation, GitHub Actions CI/CD pipeline with automated test gates, and Redis query caching — reducing repeat database reads by ~40%.

Student Internship Hub — Cross-Platform Mobile App (iOS & Android) | Flutter 3.x · Dart 3.9 · Riverpod 2 · GoRouter 14 · Dio 5 · flutter_secure_storage · Laravel REST API · OpenAI API [GitHub](#) · [Live Demo](#)

- Built a full cross-platform mobile application (iOS & Android) consuming a Laravel REST API with JWT authentication — implemented role-based routing (Student vs Recruiter) with GoRouter 14 redirect guards, personalised AI job recommendations, and a full applicant management panel.
- Integrated an AI-powered resume optimiser via OpenAI / Anthropic / OpenRouter API returning structured career-fit scores in <2 seconds per request; implemented secure token storage (flutter_secure_storage), Dio 5 interceptors for auth header injection, and automatic 401 session expiry handling.

Pulse — Cross-Platform Messaging Application | Flutter 3.x · Dart · Firebase Firestore · Auth · Cloud Functions (Node.js) · FCM · APNs [Live Web](#) · [GitHub](#)

- Shipped a real-time messaging application across 5 platforms (iOS · Android · Linux · Windows · Web) from a single Flutter codebase — sub-100ms message delivery via Firestore streams; production Node.js Cloud Function (onCreate trigger) dispatching platform-optimised FCM push notifications with deep-link payloads to all platforms.

EDUCATION

B.Tech Computer Science Engineering

2022 – 2026 (Completed)

Gopal Narayan Singh University, Bihar, India · CGPA: 7.8 / 10

Core coursework: Data Structures & Algorithms · Object-Oriented Programming · DBMS · Operating Systems · Computer Networks · System Design · Compiler Design

CERTIFICATIONS & ACHIEVEMENTS

- Top 25 Teams — Code For Bharat Season 2 (National-level software engineering hackathon, India)
- LeetCode — 150+ problems solved across Arrays · Hash Maps · Strings · Recursion · Two Pointers
- Certificate of Participation — TATA Crucible Campus Quiz 2024

ADDITIONAL EXPERIENCE

Vizva Consultancy Services — US Technology Market · Technical Recruitment Analyst

Dec 2025 – Apr 2026 ·

- Evaluated technical competencies of 50+ software engineers across Java, .NET, Python, and DevOps stacks; developed structured assessment frameworks identifying architectural depth and production experience for US enterprise clients.
- Coordinated end-to-end technical interview pipelines for 10–15 concurrent engineering profiles, ensuring 100% submission accuracy via real-time ATS workflow tracking and cross-functional stakeholder communication.
